Notes

in **Glut4** less than two-fold difference was seen between these two K(m) values; and (2) Glut1 was inhibited with pCMB, pCMBS and low concentrations of HgCl2 (IC50, 3.5 microM), whereas **Glut4** was almost insensitive to SH reagents. To examine the role of the exofacial cysteine, we replaced Met-455 of **Glut4** (corresponding to Cys-429 of Glut1) with cysteine. The **mutated Glut4** was inhibited by pCMB or pCMBS and the IC50 of HgCl2 decreased to 47 microM, whereas K(m), substrate specificity and the sensitivity to cytochalasin B were not significantly changed, indicating that the existence of exofacial cysteine contributed only to increase SH sensitivity in **Glut4**.

...ABSTRACT: encoding Glut1 protein with one of the mutations V69M or A70M; and (7) Glut1 proteins encoded by (II). BIOTECHNOLOGY - Preferred Strains: (A) is any of **DSM 14035**, 14036 or 14037; or where it contains a GLUT4 gene, DSM 14038, 14039 or 14040; or where it contains a GLUT1 gene, DSM 14026, 14027...
